USER STORY

PROJECT NAME: Discord bot for transaction notification

1. The user clicks on the discord bot link and accepts terms and conditions that the bot is going to installed in their discord.
2. Once the discord bot is installed. There will be options available:
   a. /start -> to get started and see all the features available on the bot
   b. /add -> To add wallet address for receiving notification from that particular wallet account.
   c. /delete -> To delete any of the wallet addresses that was provided before, but the user doesn't want to track that wallet anymore
3. Once the user inputs/clicks on start button, it will show information about the features of the bot with buttons for:
   a. Add
   b. Manage
   c. My Wallet
   d. PRO
4. Now, if the user selects "Add" wallet -> we ask for their pub key of the wallet and then the user gets the info about the wallet and starts getting notification of the new wallet added as well
5. If the user selects "Manage" it shows up a menu where we will have buttons for:
   a. Add – to add a wallet PubKey for tracking
   b. Delete- to delete any wallet
   c. Back – to go back to the main menu.
6. If the user selects "My Wallet" in Step 3, we show the details of the wallet.
7. If the user selects "PRO" in Step 3, we share the details of the pricing for pro subscription and the comparison between PRO and Free versions. And also methods of payments if they choose to pay. Currently, we intend to take 0.1 SOL/month
8. Once someone subscribes to PRO, we will provide the option to filter transactions at '/start'.
9. Also, a button to add recipients address and discord id would be provided so that the pro users are able to notify the user they are sending the transaction to.
10. Each state will have a back button to go to the main menu at any point of time.
